Ansley Communications launches security division

Tuesday, December 18, 2007 9:36 AM EST

Ansley Communications, an industry leader in business communications, has announced that the company has launched a security division.

The company will now offer intrusion, closed circuit television, access control, smoke and fire detection systems and monitoring to both residential and commercial customers. Ansley Communications will provide a variety of solutions in these areas from both Honeywell and Bosch, the industry's leading manufacturers.

"We conducted a thorough analysis of the marketplace as well as our valuable customer base and found an unfulfilled need for security services in our area," said Mike Foor, president of Ansley Communications. "The core competency of our company is a high level of technical knowledge so this has been a seamless transition for us. We have the internal skills as well as a team of certified professionals to help us excel in this arena. Our consultative approach will enable us to identify our customers' needs and develop customized solutions so they maximize their investment and feel good about their decision to protect their home and place of work."

Through closed circuit television (CCTV), Ansley Communications' observation and video monitoring systems offer clear pictures regardless of the environment in which they are placed. Specific products include cameras/monitors, digital recording and switching systems, and the latest IP network video products. From homes to factories and offices of any size, the company's intrusion systems meet the most rigorous standards and include the most advanced security technology.

Typical products and systems include intrusion detectors, alarms and transmission equipment. Furthermore, a full range of solutions is available for building management, time management and access control. Flexible systems allow workers to conduct operations on a normal basis while protecting staff from uninvited guests and businesses from property and information theft. The company offers fully integrated management systems from small- to mid-sized businesses to the enterprise level.

Ansley Communications provides homes and businesses of all sizes with automatic fire alarms and detectors, special detectors and peripherals for fire prevention, warning and building evacuation. Their state-of-the-art products include multi-sensor detectors that continually search for fire-specific patterns to prevent false alarms and needless disruption to business.

"Ansley Communications is very excited about offering technology that protects the lives and properties of our community," Foor said. "We established this division in a methodical manner so we could ensure superior solutions that are backed by world class customer service 24 hours a day, 365 days a year. Our company and our people are dedicated to this venture and the people in which we serve."

Ansley Communications Group is a service-oriented telecommunications company who has offered business telephone and cabling solutions to Northeast Georgia for more than a decade. As a natural extension to their strengths in cabling, Ansley Communications has recently added business security to an already strong product line, offering customers a total solution for telecommunications and security needs, a spokesman said.

Ansley Communications is backed by more than 60 years of experience, ongoing technical support and unmatched customer service.
